Abstract (en)

[origin: WO2008128587A1] The invention relates to a cleat (1) for a shoe, particularly for a golf shoe, that can be attached to the underside (2) of a sole (3). In order to improve the grip of the shoe on the ground, particularly when playing golf, the invention proposes that the cleat (1) comprises a base cleat body (4) that can be connected to the sole (3), and that at least one extension (5) extending in the direction of the ground is located on the base cleat body (4), wherein the vertical projection surface (A_F) of the end of the extension (5) facing the ground is located at least partially, preferably completely, outside the vertical projection surface (A_G) of the base cleat body (4). The invention further relates to a shoe sole having such a cleat, and to a shoe.
