Abstract (en)
[origin: US8272558B2] The invention relates to a suspension file (10, 110) for accepting documents, comprising a web (12) made of foldable material with two top edges (14) and two lateral edges (16) which interconnect the top edges (14). The web (12) is folded on a bottom (20) of the file so as to form at least one fold (18) and is provided with two sidewalls (22) that extend from the bottom (20) of the file to the top edges (14). Hooks (26) that project from the lateral edges (16) are attached to the top edges (14). The suspension file (10, 110) further comprises at least one reinforcement element (36) which is connected to the web (12) and extends from one top edge (14) to the other along one of the lateral edges (16). According to the invention, the at least one reinforcement element (36) is arranged at a distance from the respective lateral edge (16).
