Abstract (en)
[origin: EP2223859A1] A labelling machine comprises a self-regulating arresting member (12) of a label (6) holder tape (5). The arresting member is able to press the tape (5) against an abutting surface (13) when a label has to be applied on a destination surface and it releases said tape (5) when, on the action of a control device (14) the tape (5) is actuated to advance. The labelling machine further comprises a printing device (38) whose inking roller (42) is associated to a device (44) that enables it to be engaged easily and conveniently on a respective support arm (39). The support arm in turn is advantageously connected to an access door (53) to internal areas of the labelling machine, whose opening determines the exit of the support arm (39) and the exposure of the inking roller (42).
