Abstract (en)

[origin: WO2008119742A1] The invention relates to a method for producing trioxane from trioxymethylene glycol dimethyl ether (POMD-ME<sub>n=3</sub>) by reacting trioxymethylene glycol dimethyl ether in the presence of an acidic catalyst and subsequently processing the reaction mixture by distillation. The method comprises the following steps: a) feeding trioxymethylene glycol dimethyl ether (POMDME<sub>n=3</sub>) or a mixture containing trioxymethylene glycol dimethyl ether to a reactor and reacting the substance in the presence of an acidic catalyst to give a mixture (a) containing trioxane, formaldehyde, water, methylene glycol (MG), polyoxymethylene glycols (MG<sub>n>1</sub>), methanol, hemiformals (HF), methylal (POMDME<sub>n=1</sub>) and polyoxymethylene glycol dimethyl ether (POMDME<sub>n=1</sub>); b) separating the reaction mixture (a) by distillation to give a low-boiling fraction (b1) containing trioxane, formaldehyde, water, methylene glycol, methanol, hemiformal (HF<sub>n=1</sub>), methylal and dioxymethylene glycol dimethyl ether (POMDME<sub>n=2</sub>) and a high-boiling fraction (b2) containing polyoxymethylene glycols (MG<sub>n>1</sub>), hemiformals (HF<sub>n>1</sub>) and polyoxymethylene glycol dimethyl ether (POMDME<sub>n>2</sub>); c) separating the low-boiling fraction (b1) by distillation to give a low-boiling fraction (c1) containing formaldehyde, water, methylene glycol, methanol, hemiformal (HF<sub>n=1</sub>), methylal and dioxymethylene glycol dimethyl ether (POMDME<sub>n=2</sub>) and a high-boiling fraction (c2) containing trioxane.
