Abstract (en)

[origin: WO2008132059A1] A multimodal polyethylene having an inverse comonomer distribution, as well as a process carried out in a single reactor in the presence of a mixed catalyst composition comprising two different polymerization catalysts, are described. The multimodal polyethylene has a density of 0.915 - 0.970 g/cm³, a weight average molar mass Mw of 100 000 - 900 000 g/mol, and a polydispersity M_w/M_n of at least 15. The at least one homopolymer has a density of 0.950 - 0.975 g/cm³, a weight average molar mass M_w of 10 000 - 90 000 g/mol and a polydispersity M_w/M_n higher than 3 and lower than 10, and the at least one copolymer has a polydispersity M_w/M_n between 8 and 80.
