Abstract (en)

[origin: WO2008125079A2] A device for delivering drawn fiber material (6) particularly suited for knitting machines is disclosed. The device comprises a drawing unit (7) and at least one subsequent spinning device (8, 14) having a twisting element (9, 12) for generating a temporary yarn (15) and a spinning and transport tube (10, 11) connected to the twisting element (9, 12) for forwarding the temporary yarn (15), particularly to a knitting machine. A cleaning station (16a) connected to a collector line (17) and serving to clean and remove fly fibers is connected between two successive segments of the spinning and transport tube, or between two successive spinning devices (8, 14), said cleaning station forming a substantially closed flow system with the corresponding ends of the segments or spinning devices (8, 14).
