Abstract (en)

[origin: WO2008135634A1] A steel frame of a building comprising at least horizontal beams (3) and vertical pillars (1, 2), in which a support surface is formed to at least one end of one pillar (1) and a mating surface is formed to at least the end of another pillar (2) so that the support surface and mating surface can be arranged one inside the other, thus forming a sleeve construction. In the method vertical pillars (1, 2) are erected and at least (1, 2) are arranged as extensions of each other by means of sleeve connection.
