Abstract (en)
[origin: WO2008133519A1] A wall element comprising two outer layers extending at least substantially parallel to each other, between which an intermediate layer is provided, which intermediate layer extends in zigzag fashion between the outer layers, said intermediate layer comprising first parts, which extend at least substantially parallel to the outer layers, and second parts, which extend between adjacent first parts, wherein first parts of the intermediate layer facing towards one outer layer are connected to said one outer layer, and wherein first parts of the intermediate layer facing towards the other outer layer are connected to said other outer layer, a special feature being that the intermediate layer is at least substantially made of a plate-shaped metal material, with a corrugated (in cross-section) profile formed in the plane of the plate-shaped material, the corrugations of which profile extend in a meander-like fashion in the plane of the plate-shaped material and over several first parts of the intermediate layer.
