Abstract (en)
[origin: WO2008119591A1] The invention relates to a control valve (18), particularly for a device (1) for altering the actuation periods of an internal combustion engine, comprising a valve housing (34) that is configured with a substantially hollow cylindrical structure, a control piston (37) disposed inside the valve housing (34) and axially displaceable therein, and a closing element (39), wherein the control piston (37) comprises at least one section with a hollow structure that ends in an opening (37b) of the control piston (37) and wherein said closing element (39) is disposed in the opening (37b).
