Abstract (en)

[origin: WO2008037052A1] A machine (10) for generating mechanical energy and functioning on the principle of exploitation of centrifugal forces of masses (M) being displaced along a closed mechanical circuit (12) over at least a curved section of the circuit (12). Optionally, the machines also functions on the principle of energy gain caused by masses (M) falling under the influence of gravity in the closed circuit (12) that is permanently maintained in a state of dynamic unbalance with an input, continuous or not, of external energy (WO, Wmag).
