Abstract (en)

[origin: EP2143472A1] A two-piece skateboard (10) includes a front foot support member (20), a rear foot support member (24), and a rigid bar (28). The front foot support member (20) is stopped against the rear foot support member (24). The rigid bar (28) has a front end fixed to the front foot support member (20); and a rear end rotatably mounted to the rear foot support member (24). In light of this, the user eccentrically pressurizes the front and rear foot support members (20, 24) repeatedly to enable them to incline toward opposed directions in such a way that the skateboard (10) is moved forward. Because the rigid bar (28) can limit the way that the rear foot support member (24) is twisted, the maneuverability of the skateboard (10) can be easier.
