Abstract (en)
[origin: EP2143648A1] A container produced in a rigid material with side parts (2), a bottom part (3), and an upper part (4), and a lining (16) attached internally in a body (1). The upper part (4) has first and second upper panels (5, 7) for forming a ridge. At least one of the first and second upper panels (5, 7) has a projecting flap (11) for folding jointly with a projecting length (17) of the lining (16), to lie against the opposite upper panel (5 or 7), against which they are secured in a closed state. The upper part (4) further has at least one gable part, which is infolded between the first and second upper panels (5, 7) in the closed state. The projecting flap (11) has a first tear line (19) and a second tear line (20) for simplifying tearing off of an outer part (21) of the flap (11). The lining (16) has a first weakening (22) in line with the first tear line (19), and the lining has also a second weakening (24) in line with the second tear line (20) on the flap (11), for opening of the lining (16) together with the infolded gable part.
