Abstract (en)
[origin: EP2143656A1] The bottle (1) has a mouthpiece (2) for forming an outlet opening (3), and a swing top cap (4) attached to the mouthpiece, where the swing top cap has two pins (5). A sleeve (11) is locked in an area of the mouthpiece, and two diametrically opposite recesses (12) are formed in the sleeve. The pins of the swing top cap are pivotably held in the recesses in an assembled condition of the bottle and the cap. An inner lateral surface of the sleeve is formed like a truncated cone, and a lateral surface of the mouthpiece is adapted to the inner lateral surface of the sleeve.
