Abstract (en)

[origin: EP2143860A2] The lock has a face plate rail (2) covering a connecting rod (8), and a swing bolt fixedly supported around a pivoting axis. The swing bolt cooperates with the connection rod such that the connecting rod is swiveled out from a recess into the face plate rail in a direction of the swing bolt, and is returned into another direction, during displacement. Locking engagement elements are attached to the swing bolt at a frame. The swing bolt and the connection rod are connected by a knee lever mechanism, which comprises a lever.
