Abstract (en)  
An insect screen for mounting in a window opening comprises a surrounding frame (1) defining a central opening and a gauze (8) spanning said central opening and connected to the frame with its circumferential edge. The frame is provided with an outwardly projecting mounting wing (3) to be received between a stationary part (9) and a movable part (10) of the window. The frame comprises a base part (4) and a separate locking part (5), wherein said base part and locking part are provided with cooperating locking members for locking the locking part to the base part while clamping the gauze between both parts, and wherein the mounting wing is part of the locking part.
