Abstract (en)  
[origin: EP2143955A1] The pump has a head part (3) and a foot part (2) made of stainless steel, and pump stages (1) integrated between the head part and the foot part. The foot part serves to connect the pump to a drive motor, where the pump includes inlet openings for delivering fluid. The foot part has a motor-side component (8) and a pump-side component (9) separated in radial planes and formed with different manufacturing processes. The motor-side component is manufactured with a casting process. The motor-side component has receivers for a fastening unit for connection to the motor and/or the head part.
