Abstract (en)  
[origin: EP2144033A2] The fuse has a firing assembly for firing a main charge of a projectile. A delay detonator (10) fires the firing assembly after a delay time defined by a burning distance (66) of a delay charge (30). The delay detonator has a housing (26) with a fuse half (60), in which the detonator is fired, and a detonator half (62) containing a detonator charge (34) for firing the firing assembly. The housing in the fuse half has a relief opening (40) with an opening cross section that is freely passable in a firing state of the delay detonator.
