Abstract (en)
[origin: DE202007005259U1] The garment could be a T-shirt (1) to be used in sports. It is woven of two different kinds of threads, one used on the outer side and one on the inner surface. The thread used for inside could be a polyamide or a polyester which is not absorbent, resulting in the creation of evaporation cold on the skin. The outer surface is made of a heat reflecting material (6) which could be a precious metal preventing the garment (1) from heating up.
