Abstract (en)  
[origin: WO2008140195A1] The present invention relates to a functional footwear having a shock absorber of an operating member adapted to absorb the shock applied during the wearer's walking, such that as first and second arms and a second magnet are operated by the shock-absorbing operation, a vibration plate having a first magnet is automatically vibrated by the generation of the repulsive force with respect to the second magnet, which makes the wearer excited during walking, thereby providing pleasant walking to him or her. Especially, the magnetic field generated from the first magnet provided on the end portion of the vibration plate stimulates the acupuncture spots on the wearer's foot sole and accelerates his or her blood circulation, thereby greatly improving his or her health.
