Abstract (en)

[origin: WO2008138319A1] The invention relates to a device for holding a cannula and for the releasable arrangement on an injection pen, with a basic body (2), wherein the cannula is arranged in the basic body in a manner such that it is substantially non-displaceable along the central axis thereof. According to the invention, it is provided that latching means (3) are arranged on the circumferential surface of the basic body, said latching means being designed in order to be engaged behind by mating latching means of a release mechanism of a storage or disposal container for the device.
