Abstract (en)

[origin: WO2008142333A2] The invention relates to the field of chemistry, especially organic chemistry, and more specifically the field of heterogenous palladium catalysts used to catalyse chemical reactions generating the formation of carbon-carbon bonds. The invention also relates to a method for synthesising a heterogeneous palladium catalyst that can catalyse a C-C bonding reaction, said method comprising steps of essentially providing a solid substrate onto which groups of formula -PR<sub>1</sub>R<sub>2</sub>, wherein R<sub>1</sub> represents an optionally substituted alkyl group, or an optionally substituted cycloalkyl group, et R<sub>2</sub> represents an optionally substituted aryl group or an optionally substituted heteroaryl group, have been covalently bound, and of incorporating a catalytically effective quantity of palladium into said substrate substituted in this way. The invention further relates to the catalysts obtained and to the uses thereof in C-C bonding reactions.
