Abstract (en)
[origin: WO2008131578A1] Metering devices (1), particularly for adhesives and sealants, that can be placed on a flexible container (2) by means of an adapted ring (10), a lever (11, 11') being connected to the ring, and pressing against the container (2), are known. The invention relates to a metering device (1) wherein the lever (11) is connected to the ring via a deformable spring plate (15). A push button (110) is formed onto the lever (11) as an extension. Thus, the one-piece metering device is inexpensive and can be produced without needing to be assembled.
