Abstract (en)

[origin: WO2008142718A1] The invention relates to a system for coupling an ornamental frame to a section bar by means of an accessory having an upper head which is secured by rotation to the frame and an elastic grip body which is snap-fitted to a longitudinal groove formed in the section bar. The assembly can be applied by a known means to the surface of the door or window frame. To this end, the section bar is provided with a recess for the engaging member.
