Abstract (en)
[origin: WO2008122483A2] The invention relates to a method for producing a refrigeration device with a refrigerated interior, delimited by an inner shell (7, 8), said device comprising an outer shell (4, 5, 6) and a space between the inner shell (7, 8) and the outer shell (4, 5, 6), into which a curable insulating foam is injected. According to the invention, a sealing material is injected (2) into the space before the injection of the insulating foam (3), said material sealing joints and/or gaps and preventing the passage of the insulating foam through said joints and/or gaps.
