Abstract (en)

[origin: US2008274004A1] This invention relates to the formation manufacturing method for constructing a thermoelectric device, by dispensing a slurry composed of thermoelectric solids in a carrier fluid across a substrate. The process uses a mold to confine the slurry, and heat and pressure to cure the thermoelectric slurry into a solid. The specific method of curing the thermoelectric material is outlined, employing a new method of condensing the particulate solids into dense thermoelectric elements.
