Abstract (en)

[origin: EP2145677A1] The device (10) has a conveyor comprising containers (16) that are successively assembled for forming monoblock self-supporting crowns (12, 14), where the containers respectively comprise products e.g. base tints. Each container has a connection piece for integrating both sides of the container to adjacent containers located along the circumference of the crowns. A semi-circular monorail (22) provides a degree of freedom for rotation of the crowns around a horizontal axis (D) of the conveyor.
