Abstract (en)

[origin: EP2145773A1] The method involves connecting material-web strands (10, 11) by an adhesive along a connecting line running in a longitudinal direction of a material web (1). Sub-products are separated from the interconnected strands by cutting transversely to an advancement direction (A) of the web. The sub-products are stacked to form a stack, and are connected with each other during stacking or following stacking. The sub-products are folded individually or as a stack about a folding line that runs between adjacent printed portions of a printed sheet. Independent claims are also included for the following: (1) a device for producing multi-leaf, folded printed products (2) a multi-leaf, folded printed product comprising sub-products.
