Abstract (en)
A container (10) includes a plurality of walls (14,18) extending upward from a base (12). At least one support (20) is movable between a retracted position and a support position. The support (20) is pivotably connected to a first wall (18) such that it can extend further into a mouth of the container (10). The plurality of walls (14,18) and the support (20) being arranged such that first wall (18) is pivotable toward a collapsed position on the base (12) when the support (20) is in the support position relative to the first wall (18).
