Abstract (en)

The apron has a juxtaposition of fixed and orientable slats (2A, 2B), and a transmission unit for intervening on orientation of the orientable slat when the apron is in deployed position. The orientable slat is subjected to an elastic return unit (10) in alignment position in a plane of the apron. The orientable slat is connected to the fixed slat by a joint. The return unit is formed of a helical spring (11) interacting between the orientable and fixed slats.

Abstract (fr)

L'invention concerne un tablier de dispositif d'occultation comportant une juxtaposition de lames (2A, 2B) dont certaines (2B) au moins sont orientables sous l'impulsion de moyens de transmission (6) adaptés lorsque ledit tablier (1) se trouve en position déployée. Avantageusement, au moins une desdites lames orientables (2B) est soumise à des moyens (10) de rappel élastique en position d'alignement dans le plan P du tablier (1).
