Abstract (en)
[origin: EP2146140A2] The light (1) has support body with a circular opening, and a carrier (11) with a socket (111) for holding an electric lamp and a reflector (15). The opening has an opening edge (171) and an opening center (19), where the opening defines a rotation axis running perpendicular to an opening plane through the opening center. The carrier has carrier bearing shoes, and a bracket (13) has bracket bearing shoes (133, 134). Each carrier bearing shoe and each bracket bearing shoe encompass the opening edge such that the shoes move along the opening edge and rotate together around the rotation axis. An independent claim is also included for a method for assembling a light.
