Abstract (en)

[origin: EP2146328A2] The lock (120) comprises a closing unit for locking and unlocking of a door or a container (110). A control unit is provided for controlling the closing unit. A memory unit is provided for storing identification data for identification of the lock and for program data for representation of a user interface. A gateway is provided for sending the program data and the identification data to an attached computer (130), and for receiving of command data of the attached computer. Independent claims are included for the following: (1) a safety container comprises an inner chamber for receiving an object; (2) a system for monitoring a lock; (3) a method for controlling a lock; (4) a method for transporting a safety container; and (5) a method for protecting a safety chamber.
