Abstract (en)

[origin: EP2146361A2] The switching device has a disk (15) that is pivoted around a disk axis (16), which is pivoted in a forward and backward direction by an operating person from a position to another position. A plate (20) is pivoted around a plate axis (21), which is coupled with the disk by two rods (31,32) in such a manner that a pivoted movement of the disk leads to a similar pivoted movement of the plate.
