Abstract (en)
[origin: WO2008132271A1] The invention relates to a mould arrangement for injection moulding, which is meant particularly for manufacturing of pipe fittings or like that are made of plastic and the dimensions and/or forms of which differ from each other, whereby at least partly interchangeable mould and/or core surfaces are being used. The mould arrangement comprises a sector cradle (3) that can be placed in a mould frame (1) in two or more positions particularly in order to enable manufacturing of pipe fittings with differing joint angles by means of one and the same mould frame.
