Abstract (en)
[origin: WO2008138870A1] The invention relates to a measuring system comprising at least one first measuring means for detecting at least one frequency-independent electrical variable, an evaluation unit for detecting the temporal behavior of the frequency-independent electrical variable, the evaluation unit automatically generating a signal based on the detection of the evolution in time of the frequency-independent electrical signal, said signal being at least partially equivalent to a frequency-dependent signal. The invention also relates a measuring method. According to said method, at least one first measuring means detects at least one frequency-independent electrical variable and an evaluation unit detects the temporal behavior of the frequency-independent electrical variable, the evaluation unit automatically generating a signal based on the detection of the evolution in time of the frequency-independent electrical variable, said signal being at least partially equivalent to a frequency-dependent signal.
