Abstract (en)

[origin: FR2909080A1] The equipment has a metallic support structure (11) and a shelter structure (10) installing central rear and front containers and lateral containers (12, 12', 13) under the floor. Swiveling bolts integrate the containers to be superimposed using cuts which are corresponding to openings provided in the support structure. The openings permit the access to hollow elements receiving the bolts and situated at the bottom of vertical edges of the containers.
