Abstract (en)
[origin: CA2684675A1] Disclosed is an apparatus for accepting and dispensing value documents. Said apparatus comprises a device for verifying the authenticity of fed value documents, a storage device encompassing at least two stores for storing at least two different types of value documents such that a value document of each of the two types can be optionally dispensed from the storage device regardless of the order in which value documents are introduced into the storage device, a temporary storage device for individually and temporarily storing at least two verified value documents that can be moved between at least one accepting position, in which value documents conveyed by the verifying device can be temporarily stored in the temporary storage device, and storing positions which are associated with the stores and in which at least some of the value documents that are temporarily stored in the temporary storage device can be conveyed from the temporary storage device into the respective store, and a conveying device which allows the temporary storage device to be moved between the accepting position and the storing positions.
