Abstract (en)

[origin: WO2008144373A1] A technique for providing caller-originated alert signals in circuit-switched communications is disclosed. According to one embodiment, the technique may be realized as a method comprising the steps of: transmitting (2504), from a first user equipment (2600), a request to initiate a communication session with a second user equipment (2600); notifying the second user equipment (2600) of the communication session and an incoming caller-originated alert, the notification being transmitted via a circuit-switched channel; and causing a phonepage server to transmit (2508), via a packet-switched channel, the caller-originated alert to the second user equipment (2600) for rendering (2510) thereon to alert a user associated with the second user equipment (2600).
