Abstract (en)

[origin: WO2008138890A1] According to an embodiment of the present invention, a projection device for projecting image contents to a inside wall in a large-capacity cabin of a transport means is provided, with which arbitrary image contents can be projected across a large area on a curved inside wall. In addition to a plurality of projectors, the projection device may comprise a plurality of mirrors for deflecting the image contents. Thus, the image quality can be improved.
