Abstract (en)

[origin: EP2147873A2] The package has a base plate (2) made of deformable plastic or vegetable fiber, and with an upper peripheral edge (10) extending around and above a bottom (6) of the plate. A bell type deformable plastic cover (3) is removably mounted on the plate by a peripheral edge (15) of the cover. A ventilation orifice (12) is formed in a traversing manner on the upper edge, and located towards interior of the cover when the cover is mounted on the plate. The upper edge is extended integrally above the bottom such that interior of the package freely communicates with exterior of the package.
