Abstract (en)

[origin: EP2147892A1] A device for handling a hose is provided. The device (1) allows the hose (3) to be pulled out from a hose storage space (5) and is adapted to return the hose (3) to the hose storage space (5), said device comprising a hose guiding means (7) having a carrier means (9) including a first roller (11) being rotatable around a first axis (13), and a second axis (17) connecting the hose guiding means (7) to said hose storage space (5), the hose guiding means (7) being vertically moveable in said hose storage space (5). The device (1) is characterised in that the second axis (17) is arranged at a fixed distance from the first axis (13) of the first roller (11); and that the hose guiding means (7) is pivotable around said second axis (17). A method for handling a hose and a fuel dispensing unit comprising a device for handling a hose are also provided.
