Abstract (en)  
[origin: WO2008141348A2] The invention relates to a piece of furniture (1) comprising a furniture body (2), a furniture part (3) that is mounted so as to be mobile relative to the furniture body (2) and a drive device (5) for moving the furniture part, which drive device can be triggered via a switch element (4) and comprises at least one motor. The switch element (4) is covered by the furniture part (3) in or on the furniture body (2) when the furniture part (3) is closed and an indirect actuation of the switch element (4) via a force exerted by a user and impacting the mobile furniture part (3) triggers the drive unit. The switch element (4) triggering the drive device (5) is accessible for the user and can be directly actuated when the furniture part (3) is moved out of the closed position.
