Abstract (en)

[origin: WO2008142069A1] The invention relates to a method for producing a product section (16) in a printing machine, having at least one former (11.1, 11.2, 11.3) and a web (03) or partial web (03.1b, 03.1a, 03.2b) guided over this former. At least one web or partial web (03.1a) is initially guided over a plow fold device (18) and then over an odd number of, particularly only one, turning bars (19) and, finally, without passing through a former, is united, on a side which has been folded in by the plow fold device, over at least one guide roller (27) as a partial strand (23), with a partial strand (24) guided over the former (11) as a strand bundle before this partial strand is cut transversally in a transverse cutting direction (17) into product sections (16).
