Abstract (en)

[origin: WO2008147208A1] The present invention concerns a system for attaching a propeller nozzle (4) to a structure (5) including a vessel or a part of a vessel. The nozzle (4) surrounds a propeller that is supported in the structure (5). The system includes at least one first attachment point (2) for attaching the nozzle to the structure substantially for taking up pressure forces, at least one second attachment point (3') for attaching the nozzle (4) to the structure (5) for accommodating forces in tension, and at least one strut (1) attached in at least one strut attachment point (1') on the nozzle (4), for accommodating forces in tension, extending between nozzle (4) and the structure (5).
