Abstract (en)

[origin: WO2008152298A1] The method of the invention for acquiring and processing data for detecting the evolution in time of evolutive lesions comprises: successively acquiring data according to different acquisition modes so as to generate at each acquisition moment a set of data obtained according to the respective acquisition modes; storing the acquired data in a database; and displaying the data by selecting and displaying the selected data on a display screen. During the data display step, the method comprises inserting into an image being displayed at least one corresponding data extracted from the database.
