Abstract (en)

[origin: EP2149452A2] The machine has a print unit for printing print substrate webs, and a longitudinal cutter arranged in a web path after the print unit Two turning bars are arranged parallel to each other such that the turning bars are turned synchronously around 90 degrees in a web moving direction (R2) by one by third width partial web and two by third width partial web. Formers (31, 32) are arranged after a turning unit (20) for simultaneously converting the partial webs to three-side products, and for converting unseparated printing substrate webs to two-side products. An independent claim is also included for a method for manufacturing a print product by a rotary printing press.
