Abstract (en)
The present invention refers to a method of production of a saturated and stable ozonized oil-based vehicle, which comprises: providing a pre-established amount of a pre-established unsaturated oil-based vehicle inside a tank; a first insufflation step wherein a continuous gaseous flow comprising oxygen, ozone and at least one noble or inert gas is insufflated into the oil-based vehicle, until the oil-based vehicle is saturated with ozone; a second insufflation step wherein a continuous gaseous flow comprising oxygen, ozone and at least one noble or inert gas is insufflated into the oil-based vehicle saturated with ozone, until a constant ozone concentration value is obtained in the oil-based vehicle for at least a pre-established time interval or number of measurements, with the stabilization of the saturated oil-based vehicle.
