Abstract (en)

[origin: EP2149643A2] The fitting has an odor trap arranged in a housing (1), where the odor trap has a cup or bowl shaped container (5) and an immersion pipe (6) projecting into the container. The immersion pipe is removably held at an inlet opening (2) of the housing, where a middle horizontal outside diameter of the container is larger than a middle inside diameter of the inlet opening. The container is partially flexibly formed, such that the container is compressible to insert into the housing and to remove from the housing through the inlet opening in the compressed condition.
