Abstract (en)

[origin: EP2149656A1] Method of manufacturing an improved designer ceramic gravestone in which once the decoration thereof has been composed, the four colours of the desired elements are filmed using special software, thus obtaining four films, one for each colour (magenta, cyan, yellow and black). Next, insolation of the films on special papers or sheets is carried out, and then the pigments or colours are applied to the sheets, obtaining a base that will be applied on the enamelled item. With this application an article with the final design that will be fired in the kiln again, for fusion of the two enamels, is obtained.
