Abstract (en)

[origin: EP2149664A2] The substructure (2) has a round rotary button (10) of an eccentric cam (9), which lies in a bearing cavity (12) of the clamping plate (6). An eccentric pin (11) is engaged in a transverse slot (13) of the mounting plate (5). The base of the bearing cavity forms an annular supporting edge, which supports the front side of the rotary button. An independent claim is included for a hinge with a screwing tool through opening.
