Abstract (en)

[origin: WO2008138494A2] The guide structure for a part which can be extracted parallel to an extraction direction from the body of furniture piece or the like comprises a extractable guide element longitudinally parallel to the extraction direction and adapted to be fixed to the extractable part and a load-bearing guide element longitudinally parallel to the extraction direction and adapted to be fixed to the body of the furniture piece, and means for its stabilisation adapted to progressively oppose the progressive increase of the bending moment to which it is subjected due to the weight of the extractable part as the extraction of the extractable part from the body of the furniture piece proceeds.
